Hi Ken,
So, here's the status of the permits you requested:

Honouliuli – issued **final** on 2/28/14; minor modification 4/28/14 to address typos (see attached).

- Chlordane and dieldrin – no effluent limits in previous permit; current permit includes effluent limits based on WQS x dilution factor.
- Compliance schedule included with interim limits for new enterococcus limits.
- Includes performance-based limit for ammonia.

Sand Island – **DRAFT**, not yet public-noticed, and may need to be revised (see attached).

- Chlordane and dieldrin – draft permit includes less stringent limits than those included in previous permit.
- Compliance schedule included with interim limit for new monthly average enterococcus limit (daily maximum kept the same as in previous permit).
- Includes performance-based limit for ammonia.

Hilo – **public noticed** on 1/9/14 (see attached).

- Compliance schedule with interim limits for new criteria end-of-pipe limits (no dilution) for nitrate + nitrite.
- Also, includes new limits for cyanide and enterococcus.

Let me know if you have any more questions. I'm here to help!

-Elizabeth
